+62-857-1064-8954 | mwaaritsh@gmail.com | linkedin.com/in/mwaaritsharahap | https://www.mwaarits.tech/
Bekasi, Jawa Barat

Information Technology student at President University with a concentration in Cyber Security. Experienced in provisioning and securing cloud environments through hands-on academic and personal projects, including Azure infrastructure deployment, Infrastructure-as-Code with Terraform, and network security implementation. Motivated to translate hands-on cloud knowledge into practical impact within a professional team.

EDUCATION

President University <i>Bachelor of Science in Information Technology</i>	2024 - Present <i>GPA: 3.64</i>
---	---

TECHNICAL SKILLS

- **Cloud & Infrastructure:** Microsoft Azure (App Service, Container Apps, VNet, Key Vault), Linux, Git, Docker.
- **Programming & Scripting:** C++, Python, Bash.
- **Networking & Security:** TCP/IP, Subnetting, DNS, RBAC, Log Monitoring.

PROJECTS

Dark Network Mesh & Post-Quantum Cryptography VPN

Project Manager & Infrastructure Engineer

- Led a 5-person team through 2 sprints in Jira, translating requirements into a structured backlog, manage task dependencies and re-prioritizing scope without missing the delivery deadline.
- Provisioned and administered the Azure VPS (user access, network security rules), and configured WireGuard mesh tunnels with Rosenpass post-quantum key exchange (ML-KEM-1024).
- Delivered a fully verified system meeting 100% of mandatory requirements, confirmed through live connectivity and network scan testing

Retrieval Augmented Generation Web App

Cloud Engineer

- Deployed a RAG document Q&A app (Gemini embeddings, ChromaDB, hybrid BM25 & vector search) with per-user data isolation and cited answers, deployed to Azure Container Apps via Terraform.
- Containerized the app with Dockerfile and non-root runtime user and provisioned its Azure deployment using Terraform including Container Apps environment, VNet and Azure Files for persistent vector storage.
- Secured the deployment with managed identity and least-privilege RBAC (AcrPull, Key Vault Secrets User), and automated image builds to ACR via a GitHub Actions pipeline on every push to main.

Web3 Escrow Bug Bounty Platform

Cloud Engineer

- Built and deployed a full-stack escrow platform (Hono/Node, React, viem) to Azure App Service with GitHub Actions CI/CD, indexing on-chain bounty events in real time for crypto wallet-connected users.
- Provisioned Azure App Service + PostgreSQL in a private VNet with Key Vault-backed secrets, enforcing managed identity and least-privilege RBAC (AcrPull, Key Vault Secrets User).
- Implemented custom domain mapping via Azure DNS, provisioned TLS certificates, and enforced HTTPS-only access.

CERTIFICATES

Microsoft Azure Fundamentals (AZ-900) <i>Issued by Datacamp</i>	2026
Learning Cloud and Generative AI Basics on AWS <i>Issued by Dicoding</i>	2026
CCNA - Introduction to Networks <i>Issued by Cisco</i>	2025
